

## **Cantharidin Homecare Instructions:**

Wash the treated areas thoroughly with soap and water for \_\_\_\_\_ minutes after application. Within 24 to 48 hours, a superficial blister should appear at the site of the application. Do not “pop” the blister. Within a few days, the blister reabsorbs on its own. Should the blister pop, apply a generous layer of Aquaphor and cover with a bandage. The blister should dry up, and fall off within one to two weeks.
